HILLSDALE ROAD WATER AND SEWER REPLACEMENT PROJECT

The Hillsdale Road Water and Sewer Replacement Project will replace 0.75 miles of 12-inch-diameter water main and 800 feet of 8-inch-diameter sewer line along Hillsdale Road in Rancho San Diego.

PROJECT BACKGROUND

The Otay Water District provides water and sewer service to the Rancho San Diego area in the Jamacha Basin. The District regularly invests in capital improvement projects to assure efficient operations, comply with regulations, and replace aging infrastructure. District capital improvement projects are funded through user rates and capacity charges.

PROJECT OVERVIEW

The Hillsdale Road Water and Sewer Replacement Project is located in Rancho San Diego, an unincorporated community of San Diego County. District contractors will install approximately 0.75 miles of a 12-inch-diameter water main and 800 feet of an 8-inch-diameter sewer line in the Hillsdale Road public right of way between Jamacha Road and Vista Grande Road. The new water main will replace a 12-inch-diameter water main that can no longer reliably provide water service to the area. The new main will follow a new alignment to minimize service disruptions during construction. After the new water main is in service, the existing aged pipeline will be filled with concrete and abandoned in place. The sewer-line replacement will reduce the potential for sewer overflows.

PROJECT COST

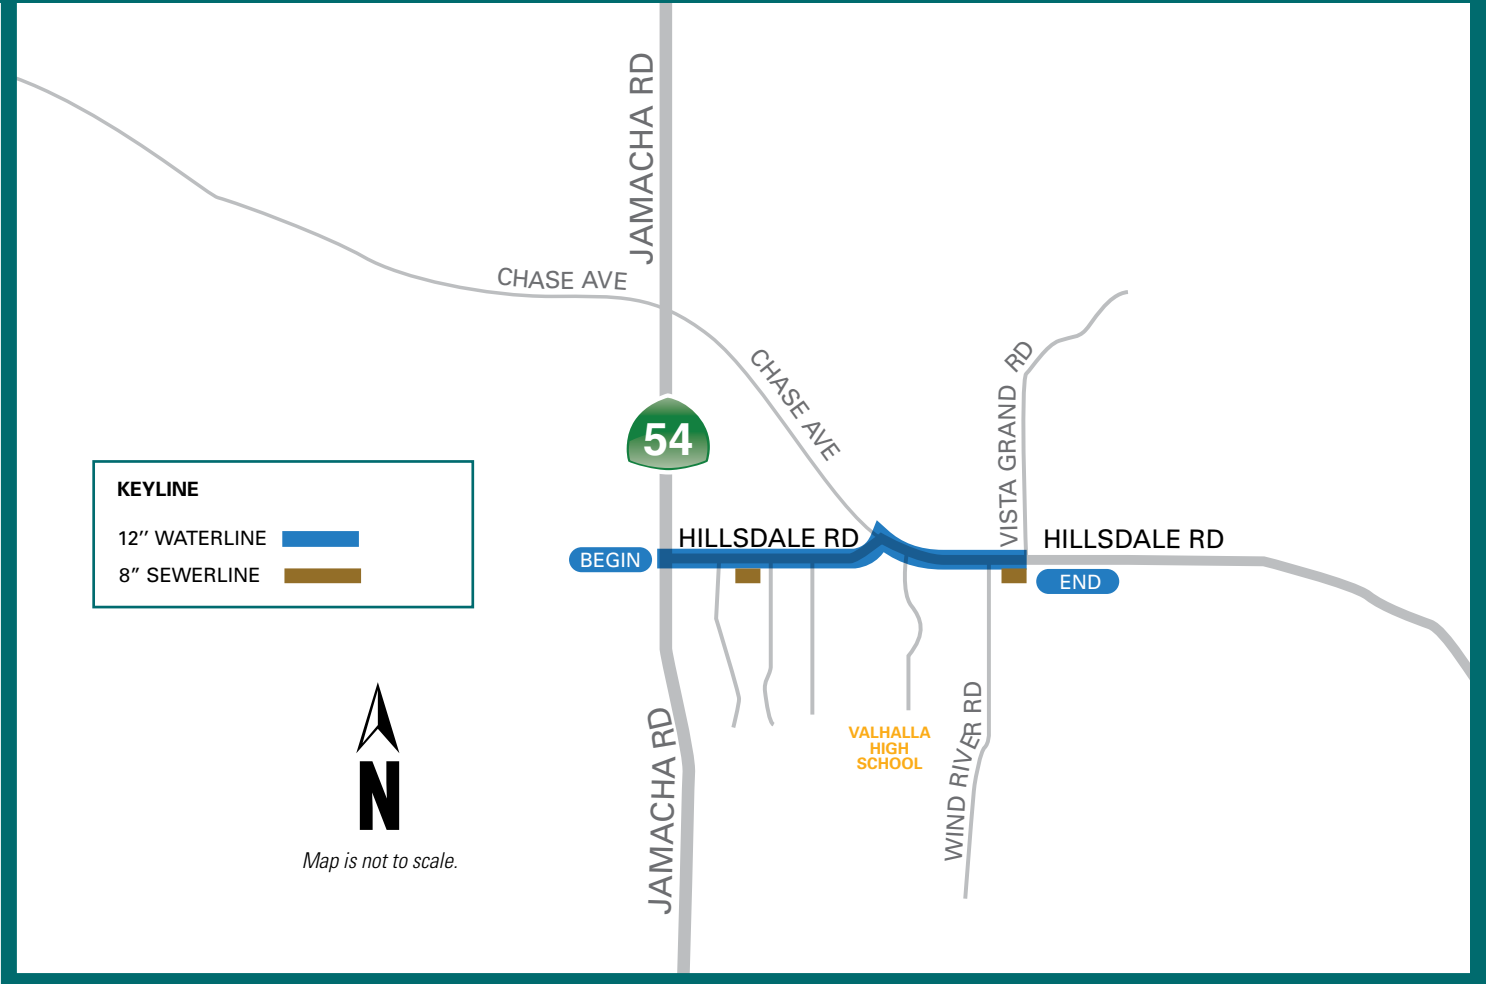

The District's budget for the Hillsdale Road Water and Sewer Replacement Project is approximately \$3.0 million.

PROJECT SCHEDULE

Construction will begin in October 2017 and be completed by June 2018. San Diego County is scheduled to repave the entire roadway during Summer 2018.

HILLSDALE ROAD WATER AND SEWER REPLACEMENT PROJECT

The Otay Water District is a public agency distributing water to more than 223,000 customers within 125.5 square miles of southeastern San Diego County, including the communities of Spring Valley, Jamul, La Presa, Rancho San Diego, eastern Chula Vista and Otay Mesa. The District also provides sewer collection for 15,000 customers in the Jamacha Basin, and treats and recycles wastewater for use in irrigation and industrial applications.
